

OZ60 (Ozone generator)

The OZ60 ozone generator is suitable for shock disinfection and odor removal in rooms with predominantly dry ambient conditions without people being present.

Applications: Car detailing | Pest Controls | Odor Eliminations

Function: The mobile OZ60 device can be used individually to remove odorous air/surfaces and for shock disinfection in small rooms or in private areas. The ozone is formed from oxygen in the ambient air with the help of the device without any additives. The ozone molecules react quickly with a variety of organic/inorganic compounds, meaning that the “bad” air is perfectly and reliably odor neutralized and disinfected. The ozone produced is completely consumed within a certain period of time by the oxidation process and breaks down again into oxygen.

Equipment: Small design; handy stainless steel case; High-quality ozone components.

Assembly/maintenance: The ozone device is ready to plug in – cable length 3m.

Technical Data

TYPE	OZ60 230V
Dimensions in mm L × W × H	248×165×107
Housing material	Stainless steel V2A
Ozone component / lifespan	Corona board / 4000h
Ozone output mg / h	6000
Power in W	70
Tension	230V ± 10% (50 – 60Hz)
Connection cable in m	3m including Schuko plug
Weight in kg	2.8
Fan performance	90m ³ /h
