

Logistics professional LOXESS AG uses air disinfection devices from Dr. Höhle AG to protect employee employees

Safe and worry-free workspace in production, warehouse and office

The coronavirus pandemic poses numerous challenges for companies of all sizes from all industry sectors. The focus is on the question of how the safety of employees can be guaranteed where it is not possible to work from home. Since an end to this unprecedented situation is not yet in sight, and the possibility of new pandemics cannot be ruled out in the long term, it is in the interest of responsible employers to create the safest possible environment for their staff and visitors.

The logistics company LOXESS AG, with more than 26 locations in Germany, around 2,600 employees and a total storage area of 600,000 square meters, was facing a major challenge. As an employer with a strong sense of responsibility for his team, Dr. Claus-Peter Amberger, CEO of LOXESS AG, reacted quickly and decisively to protect his workforce against the risk of infection via aerosols. When developing the hygiene concepts, Dr. Amberger and his team rely on a functional combination of maximum protection and high flexibility at the same time: "For us as a logistics service provider, it is essential to protect the health of our colleagues without sacrificing any of our performance," explains Dr. Amberger.

With 208 SteriWhite Air Q and 4 Steriwhite M air disinfection devices from Dr. Höhle AG, LOXESS AG had already armed itself against the virus in autumn 2020 - and thus demonstrated entrepreneurial foresight in terms of employee safety. The devices were installed throughout their facilities. In offices, lounges, meeting rooms, break rooms and kitchens, changing rooms, reception areas, toilets and in the control room, the devices could be seen. In addition, the SteriWhite Air M protects the workforce in the halls above the common areas during ongoing operations.

"Due to their almost noiseless operation, the devices do not affect our work processes in any way and do not require us to leave the room during cleaning," Amberger explains his decision to opt for the Höhle devices. "In view of the performance of the devices, their small size and attractive design have a very positive impact. A big advantage is the immediate readiness for use after an uncomplicated installation. In this respect, I can recommend the UV-C air disinfection devices to all those who want to guarantee safety and functionality at the same time."
